Pavel Fursevich

Front-End Developer (ReactJS)

Career Objective

Dedicated Front-End Developer who's objective is building complex modern client-oriented web applications to be used for various purposes. I'm seeking out a cohesive collective of professionals where I could apply my skills and grow professional potential to bring benefit to both the organization and an end user

Experience

September 2022 - Present

- Created personal portfolio website with NextJS framework. Typed with TypeScript. Styling was realized with CSS modules. Deployed on Vercel platform
- Practiced applying NextJS framework using both SSR and CSR on building a movie search application. Used Redux Toolkit as toolset for Redux development. Fetching data was implemented by REST API with Redux Middleware and Fetch API
- Created Todo-List application with JavaScript and TypeScript using locale storage as a data storage
- Participated in team development of the Ecommerce application under a supervisor. The project was built with JavaScript and typed with TypeScript. Redux library was used as a state manager. Fetching data for UI was implemented by REST API with Fetch API. Possibility of user authorisation was also provided
- Created application for dynamic getting weather forecast in real time. The application was built with React library using Redux as a state manager. Typed with TypeScript. Used Axios as HTTP Client
- Practiced applying React library with React-Router-Dom during development books search application using Google API. Firebase platform was used as NoSQL database
